The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,14-23 and 28-41 are rejected under 35 U.S.C. 102(b) as being anticipated by Bailey.

Bailey discloses formation of a sputtered silicon nitride film above and below a ferroelectric capacitor in the capacitor and metallization level and above a transistor as an alternative to a CVD film (abstract) as a hydrogen barrier. The layer would provide the function of etch stop when contacted with an appropriate etchant. The formation of the film by sputtering would avoid H incorporation in the film and result in a FTIR value as recited.

Claims 2-13 and 24-27 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
